

MADAMGY

My Child's Growth, Nutrition & Development Companion

A personalized working guide for feeding, growth, vaccination, development and everyday care

Aarav

Age: 4 years 3 months

Prepared after consultation | Sample prototype only

Book 1 is the guidance and monitoring book. Detailed recipes belong in Book 2.

1. My Child at a Glance

A quick page to understand the current priorities before reading the detailed sections.

Current profile	Personalized summary
Feeding stage	Family foods; age-appropriate regular texture
Food practice	Mixed Indian household diet
Current priorities	Balanced growth, iron-rich foods, regular breakfast
Allergy status	No known food allergy reported
Follow-up	Review after 6 weeks or earlier if advised

Goal 1

Build a consistent breakfast routine.

Goal 2

Increase iron-rich food opportunities.

Goal 3

Track growth and food acceptance.

What you can do this week

Use the meal guide as a structure, not as a force-feeding target. Offer predictable meal times, allow age-appropriate choice, and record what was actually accepted.

2. Growth & Nutrition Monitoring

Reference information and your child's actual measurements should sit side by side.

Parameter	Reference / expected	Child's actual	Parent note / next review
Weight	Use approved age/sex growth reference	16.2 kg	Record next measurement
Height	Use approved age/sex growth reference	103 cm	Measure without footwear
Growth trend	Interpret serial measurements, not one number	To be reviewed	Bring prior records if available
Meal rhythm	Regular meals + planned snacks	Irregular breakfast	Target: 5 days/week

Why this matters

The Book Engine should never label a child from one isolated number. It should show the approved reference, the actual value, the trend and the action.

3. Feeding Approach & Meal Structure

The guide tells parents what to offer and approximately how much - without putting recipes in Book 1.

Time / meal	Food type / name	Planned amount	Actual / parent note
Breakfast	Cereal/millet + protein + fruit	Child-appropriate serving	_____
Mid-morning	Fruit / curd / simple snack	As planned	_____
Lunch	Rice/roti + dal/protein + vegetable	Balanced plate	_____
Tiffin	Portable nutrient-dense snack	As planned	_____
Dinner	Family meal, age-appropriate texture	Balanced plate	_____

Responsive feeding

Parent decides what, when and where; child is supported to decide whether and how much to eat.

Texture & skill

Food texture should match the child's current feeding ability and approved safety rules.

Food acceptance

Repeated calm exposure can be tracked without pressuring the child.

4. Vaccination Tracker

Schedule information comes from the approved IAP-versioned master; parents can record actual administration details.

Age / due	Vaccine	Given date & time	Brand / batch	Reaction / note	Next due
[from master]	[vaccine]	_____	_____	_____	_____
[from master]	[vaccine]	_____	_____	_____	_____
[from master]	[vaccine]	_____	_____	_____	_____
[from master]	[vaccine]	_____	_____	_____	_____

After vaccination

Book 1 can show clinician-approved hydration/feeding comfort guidance and clear advice on when an adverse reaction needs medical review. It must not fabricate vaccine dates or reactions.

5. Developmental Milestone Monitoring

Reference skill, actual observation and concern/action belong in the same row.

Domain	Age-referenced skill from approved master	Actual observation	Observed date	Concern / action
Gross motor	[reference item]	_____	_____	_____
Fine motor	[reference item]	_____	_____	_____
Language	[reference item]	_____	_____	_____
Social / adaptive	[reference item]	_____	_____	_____
Learning / cognition	[reference item]	_____	_____	_____

Important

Development varies. The system should use approved age-referenced content and clearly flag only those situations that meet the configured review/alarm rules.

6. Everyday Development Dashboard

Practical routines are part of child development too.

Toilet training

Current stage: _____

Goal: _____

Sleep

Usual sleep: _____

Concern: _____

Dental care

Brushing: _____

Dental review: _____

Physical activity

Daily activity: _____

Goal: _____

Screen habits

Current: _____

Family limit: _____

Self-care / school

Dressing, handwashing, school
readiness: _____

7. When My Child Is Ill

Feeding guidance should be supportive, simple and paired with escalation advice.

Situation	Feeding / fluid focus	What to monitor	When to contact a doctor
Fever / low appetite	Small frequent familiar foods; fluids as clinically appropriate	Intake, urine, activity	Use approved red-flag rules
Vomiting / loose stool	Condition-specific approved guidance only	Hydration, frequency, tolerance	Use approved red-flag rules
Cough / sore throat	Soft familiar foods if tolerated	Breathing, intake, activity	Use approved red-flag rules

Red flags

This panel is intentionally high visibility. Production text must come from the approved Clinical Rule Master and clinician review.

8. My Weekly Monitoring Page

Designed to remain useful when printed.

Day	Breakfast accepted	Fruit / vegetable	Bowel / toilet note	Parent note
Mon	_____	_____	_____	_____
Tue	_____	_____	_____	_____
Wed	_____	_____	_____	_____
Thu	_____	_____	_____	_____
Fri	_____	_____	_____	_____
Sat	_____	_____	_____	_____
Sun	_____	_____	_____	_____

Questions for the next consultation

Question / observation	Clinician note
